Min C V D have a Marth Chatian and marked as a challed	
The S.K.B. has a Test Station and workshop in a shed of the shipbuilding yard "SUDONEKH", and offices, drawing offices and a technical laboratory in a house in the same yard. The shipyard lies at	
the mouth of the R. BOISHAYA NEVA.	25 X 1
the S.K.B. existed already before or at least during the war. Two of the Soviet engineers (see para b below) were said to have been employed by this organisation during or before the war.	
the S.K.B. worked closely with a technical office also concerned with shipbuilding which is established at SHUVALOVO on the Northern cutskirts of LENINGRAD (square A/6 of the "MilGeoPlan von LENINGRAD" near the Lake SREDNYE). Engineers from this technical office	
occasionally paid visits to the S.K.B.	25 X 1
sometime in 1951 some of the administrative and designing offices of the S.K.B. were transferred to the "House of the	
Soviets", a large administration building	25 X 1
b) Scientific Order of Battle of the S.K.B.: Russians	
The head of the S.K.B. was ANTIPIN. Though wearing naval uniform he had the rank of Colonel.	25X1
ANTIPIN's deputy was KOZLOVSKIY who as the previous administrative head of another Institute or Works was said to have been awarded the STALIN prize.	
	25X1
SLOTOFOLSKIY was the technical director.	
The head of the development department, ST/NK EVICH, was the first Soviet official to come to BI/NKENBURG/H/RZ in order to establish the	
engineering office Dr. SZTATECSNY.	25X1
/The	

MINOVITSKIY, a certificated engineer (Dipl. Ing.) who had studied in BERLIN, was with the S.K.B. only for a short time, after which he was transferred to the technical office concerned with shipbuilding in SHUVALOVO. Engineer SHERIBOVSKIY was concerned with armatures. Apart from the a/m officials and engineers the S.K.B. employed approx concerned as well as 8 to 10 draughtsmen and a number of secretaries and interpreters. two other Soviet officers formerly with the office one SZTATECSNY in RLINKENEURC/HARZ, who subsequently were not with, but becasionally visited the S.K.B. on behalf of the Soviet Navy. They are:	25.
MINOVITSKIY, a certificated engineer (Dipl. Ing.) who had studied in HERLIN, was with the S.K.B. only for a short time, after which he was transferred to the technical office concerned with shipbuilding in SHUVALOVO. Engineer SHERIBOVSKIY was concerned with armatures. Apart from the a/m officials and engineers the S.K.B. employed approx 20 other engineers, as well as 8 to 10 draughtsmen and a number of secretaries and interpreters. two other Soviet officers formerly with the office or. SZTATECSNY in BLANKENBURG/HARZ, who subsequently were not with, but becasionally visited the S.K.B. on behalf of the Soviet Navy. They are:

e) Qualifications of the Soviet engineers employed at the S.K.B.

with one or two exceptions only,

the Soviet engineers employed at the S.K.B. were not only inexperienced,
but also had no technical talent whatsoever.

experiments carried out by the Soviet engineers on their own,
following a technical disagreement with the Germans, ended in failure and
serious damage to the WALMER machinery. Although
the group under Dr. SZTATECSNY was not employed on any worthwhile tasks from
end 1950/beginning 1951 onwards up to the time of their repatriation in
Feb 53, this should not be taken to indicate that the Soviets were able to
dispense with their assistance, but rather as an effort to keeping them
uninformed of the latest developments, prior to their repatriation.

v) Shortages

Woollen suitings of good quality and Woollen underwear were at all times' very hard to obtain.

Periodically shops were short of butter, eggs, rice and flour. The latter commodity was obtainable (in the shops) only on official holidays e.g. 1 May and 7 Nov and was rationed out at 1 kilo per head.

some of the a/n shortages were 25X occasionally created by the population obviously laying in stocks of foodstuffs, at times when certain events made the international situation look particularly alarming, such as the BERLIN blockade and the outbreak of the war in KOREA.

b) Medical service

25X1

An expectant mother is supposed to report to the "Poliklinik" latest in the third month of pregnancy. A very thorough examination then takes place and the data are entered on a form which is handed to the expectant mother with the order to report to the "Poliklinik" every fortnight, for further examinations. Two months prior to the confinement the expectant mother has to register with a maternity hospital with a view to reserving a bed.

Admittance to the maternity hospital is not given much before confinement; if confinement has taken place already at home, both the mother and child are removed to the maternity hospital. On being admitted, the mother's clothing has to be taken away from the hospital by the husband or other relations. The patient is given a nightshirt buttoning in front,

25X1

patients; likewise hospital staff could be seen lying on the grass in their white overalls during the lunch break.

noticing that the Germans were accompanied by an interpreter/escort.

SECRET

- 11 -

One of the Russian mechanics at the Test station and workshop of the S.K.B. was arrested for telling one of the sons of Engineer DETTKE that his brother was killed in KOREA. He returned to his work place after some time, but he never engaged in conversation with any of the Germans again.

German school children were often asked by Russian girls for illustrated papers from Germany. They knew the difference between East German and West German papers: declaring the former to be the "same as our own" they said they were interested in papers with pictures, for instance, of the (then) Princess Elizabeth, Princess Margaret and other pictures of that type. They were also avid for literature enjoyed by adolescent girls; there seemed to be a dearth if not complete lack of such light novels in the USSR.

One of the German girls refused, at school, to read from a book which dealt with partisan warfare and atrocities committed by the Germans in the USSR. She said she considered it as insulting to her fatherland. After at first creating an upheavel, the incident had no further consequences.

c) Political, and MGB.

Apart from being invited to take part in the 1 May and 7 November demonstrations there was never any attempt on the part of the Soviet authorities at influencing the Germans politically. On the other hand it is possible that the interpreters/escorts had the task of sounding the Germans for their political views, for they would frequently broach political subjects. Generally the Germans were careful not to commit themselves, and they also instructed their children accordingly. When one of the schoolmistresses inquired of the German children whether the reception of RIAS broadcasts was good on the radio sets of their parents (the reception on her own set being very poor) she got no response. The same schoolmistress also became aware of the Germans' exchange of letters with their neighbours via the school children mentioned in para 4(a) above, and she 25X1 caused the letters to be given up to her.

SECRET

Sometime in 1949 both foreman fitter DETTKE and fitter NATHAUS were called to the HQ of the MGB, following a failure at the testing of the WALTER machinery. They were accused of sabotage in that, prior to being sent to LENINGRAD, they had not exercised sufficient care when sent to the Maschinen-fabrik WOLF in BUCKAU (MAGDEBURG) and the submarine components factory SCHIMANN in LETPZIG respectively for the purpose of accepting parts for the WALTER machinery. The tests had shown that the parts concerned were not 25X1 absolutely stainless as they were supposed to be.
